RESULT: SUM ALL THE VALUES FROM YOUR RESPONSES	

The sum in the result represents your self-efficacy score. It should be in the range from 10 to 40. Normally the adult respondents score higher compared to the younger ones. Your score may change over time and it may vary depending on factors like your educational, marital and professional status.

The higher the score, the greater your self-efficacy or confidence in your ability to successfully manage an illness or follow through with behaviour change.
